There is no evidence of fecal contamination. If the results show the presence of coliforms it may be indicative of a contaminated water supply. Given the susceptibility of well water to external influences, it is important to test water frequently. Consult local health unit for information if required.

Il n'y a aucune preuve de contamination fécale. Si les résultats indiquent la présence de coliformes, cela peut être révélateur d'une source d'eau polluée. L'eau des puits étant susceptible d'être dégradée par des facteurs externes, il est important de la faire analyser fréquemment. Consultez le bureau local de santé publique pour plus de détails, si nécessaire.
